

BUILD HTML PAGE

Step 1: opening the text editor

Open any text editor for example notepad for writing HTML codes

Step 2: typing the HTML code

```
<HTML>
```

```
<HEAD>
```

```
<!--
```

-The Head tag is used to create a title of web page, CSS syntax for a web page , and helps in written a JavaScript code

```
</HEAD>
```

```
<BODY>
```

```
<!--
```

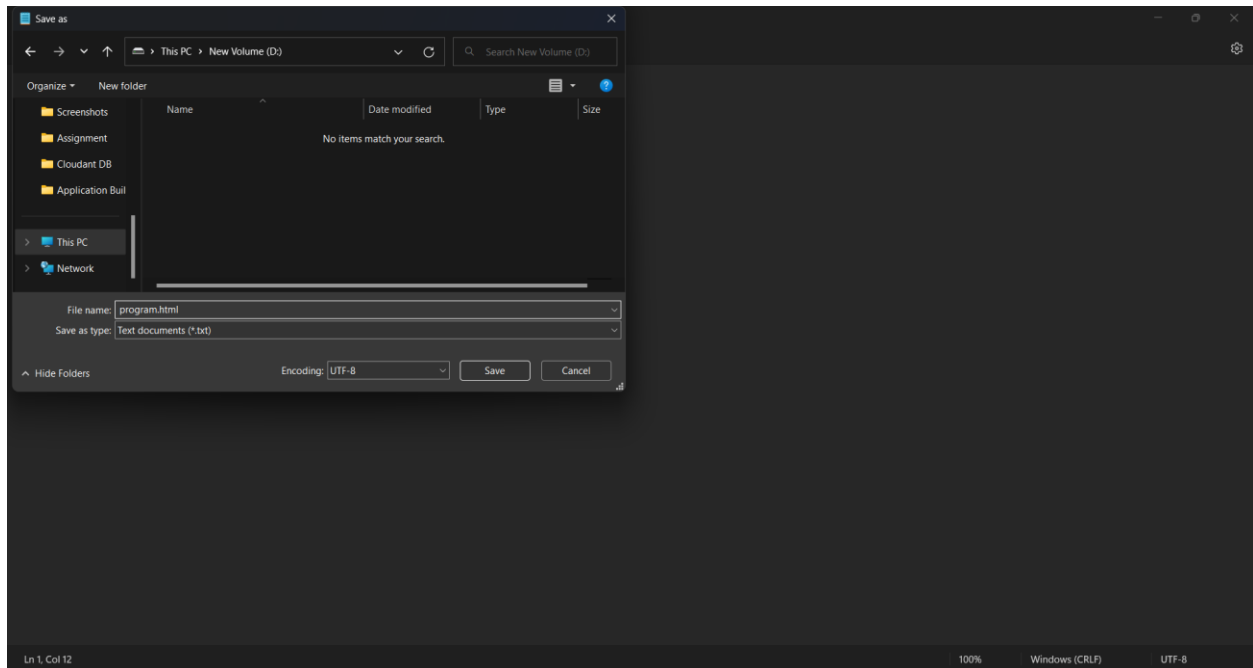

-The body tag is used to display the content on a web page, which is specified between the body tag.

```
</BODY>
```

```
</HTML> <!--it is the opening tag of any HTML-->
```

Step 3: saving the HTML code

Complete the HTML code and save the file in the folder with the extension .html

Step 4: run the HTML file

After saving the file run or execute the HTML code. The file will run in default browser
