# CLOUDANT DB

## Creating Service Credentials:

Step 1: To create the connection information that your application needs to connect the instance, click New credential.

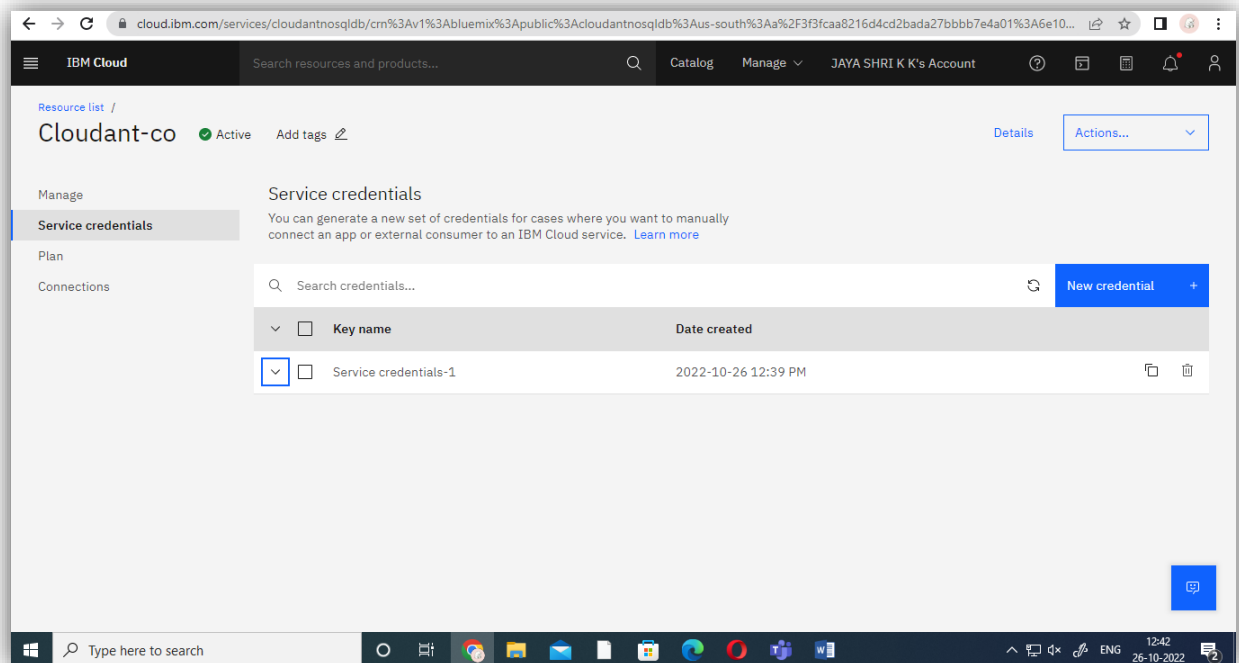

*Step 2: Enter a name for the new credential in the Add new credential window.*

*Step 3: Accept the manager role and click **Add**.*

Step 4*: To see the credentials that are required to access the service,click the chevron.*

Step 5*: The details of the service credentials open like the following example.*
